🌐 [linkedin.com/in/dinesh-malla-a12776340](https://www.linkedin.com/in/dinesh-malla-a12776340)

Objective

Enthusiastic and dedicated individual with a solid foundation in computer science and a strong passion for emerging technologies, particularly in Artificial Intelligence. Quick to learn and highly adaptable, with a focus on applying technical skills and problem-solving abilities to develop efficient, user-centric software solutions. Committed to continuous learning and professional growth in the dynamic field of technology, with a keen interest in leveraging AI to drive innovation and intelligent automation.

Education

Bachelor of Technology, CSE-AI&ML Avanthi's Research & Technological Academy	2021 – 2025 Vizianagaram, India
Intermediate, MPC NRI JR College	2019 – 2021 Visakhapatnam, India
10th, SSC Kumar's EM School	2018 – 2019 Visakhapatnam, India

Professional Experience

Software Engineer Trainee - Tester Accordion Pvt Limited	01/2025 – 07/2025 Hyderabad, India
--	---------------------------------------

Contributed to the design and execution of comprehensive test cases for product validation. Identified and documented defects, working closely with developers to drive timely resolutions and enhance overall software quality. Acquired practical experience in manual testing methodologies and actively supported the creation and maintenance of detailed test documentation and reporting.

Skills

Programming Languages
PYTHON

Database
SQL

Web Development
HTML , CSS

Soft Skills
Problem Solving , Adaptability , Leadership

Areas of Interests
Software Developer , Web Developer , Software Tester

Technologies
AI, Machine Learning , MS Excel , PowerBI

Projects

Automatic Pronunciation & Mistake Detector

To build a machine learning-based system that can analyse spoken words, detect pronunciation errors, and provide corrective feedback to help users (especially language learners) improve their speaking skills using ML modules.

Chatbot for simple questions using deep learning

Designed and implemented a rule-based chatbot to handle straightforward user queries with high accuracy and minimal response time. Developed logical rules and response patterns to interpret user intent through pattern matching and keyword recognition. Integrated core NLP components for tokenization, keyword extraction, and intent classification. Enabled structured, context-aware responses based on predefined intents. Focused on optimizing efficiency and responsiveness for seamless user interaction. Demonstrated strong understanding of basic Natural Language Processing techniques and chatbot architecture.

RAG-based Research Paper Q&A System

Developed a Retrieval-Augmented Generation (RAG) system to answer questions from research papers by combining semantic search with large language models. The system uses Sentence Transformers to generate embeddings, FAISS for efficient vector similarity search, and LangChain integrated with Llama 3 to generate context-aware responses. It incorporates document chunking, vector indexing, and semantic retrieval techniques to accurately retrieve relevant information from research papers and improve the quality and precision of generated answers.

Certifications

Data Science	ChatGPT
DataPro	IIDT
